

BEA Srl decided to establish and maintain a Quality Management System. This decision is transmitted to all organizational levels through the Policy, issued by the Management itself, and through the continuous exchange of ideas and information on the implemented management system.

The Quality policy contains the basic principles to which the company is inspired and consequently assumes the role of guide in defining Bea's objectives for the maintenance and continuous development of the ISO 9001 management system.

During the preparation for ISO 9001: 2015, the company has also carried out, for the first time, a serious and exhaustive risk analysis in order to predict and therefore prevent the factors that may undermine continuity and its survival, this analysis is reviewed, re-evaluated and consequently validated every six months.

For BEA Srl, service means

- Attention to the market in which it operates
- Quick and effective response to customer requests
- Exceptional attention in checking every possible detail of its production chain
- An extremely well stocked warehouse.

BEA Srl is the protagonist of the present with its technology, its commercial strength and its strategic presence. World leader in the production of fasteners for the energy sector and international markets.

The policy inspired by the above principles leads to:

- Commitment to compliance with mandatory legislation and other requirements
- Commitment to continuous improvement
- Commitment to customer satisfaction
- Commitment to supply products resulting from the best available technologies
- Commitment to research new markets and development opportunities

These commitments signed by the company are among the elements that allow Management to evaluate the choice of improvement objectives.

The Policy is known, shared and distributed internally and to anyone who requests it outside the company: whether they are customers, suppliers, institutions or associations.

The adequacy of the contents of this document is reassessed on an annual basis during management review before the periodic update of the certification system.
